reefs

Reef restoration

Coral nurseries are the first step in coral reef restoration and are needed to increase the amount of healthy corals

Coral nurseries

Coral nurseries are tree-like structures that provide optimal conditions for coral to grow and survive

Construction

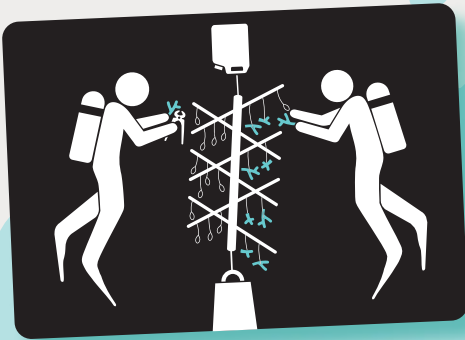

Coral nurseries are made from pipes and fishing line and can hold up to a hundred fragments of coral each

How does it work?

SIGN UP PROCESS

- You can participate in the nursery workshop by filling out the form on this flyer and leave it at the reception
- You will be contacted by e-mail to confirm your participation, preferences for lunch and way of payment

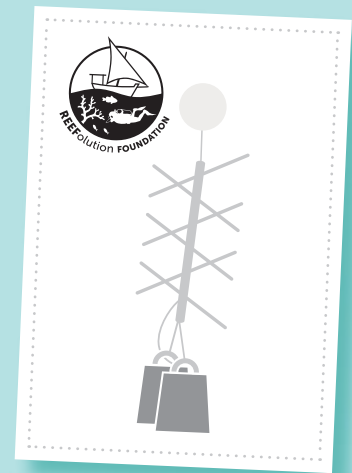

€70

Learn all about coral nurseries in an interactive presentation and have lunch with the team

Build a floating coral nursery for coral reef restoration under guidance of a marine biologist

Earn and receive a certificate of recognition that will make you eligible to volunteer with us!
